

Solutions that Reflect Business Intelligence

- ➔ No Windows™
- ➔ No Hard Drive
- ➔ No PC Server
- ➔ Scale Integration
- ➔ Labor Management
- ➔ Inventory Control
- ➔ Gift Cards
- ➔ Loyalty Program

Reflection POS is an intuitive touch screen system designed for simplicity and speed of service. With Reflection for Yogurt Shops, simply place an item on the scale, press the menu button on the screen and Reflection handles the rest.

SIMPLE. AFFORDABLE. SOLUTIONS.

PROFITABLE

Reflection POS helps restaurant owners increase profits with Sundrop Mobile loyaltXT™. With the addition of NCC's loyaltXT module, this groundbreaking, cardless loyalty program allows you to keep track of spending habits and create promotions to keep them coming back.

RELIABLE

Compact Flash

Reflection POS uses compact flash memory rather than a traditional hard disk drive, improving reliability and reducing maintenance.

No Single Point of Failure

Reflection POS is equipped with the most sophisticated, terminal-redundant network on the market. Using the integrated high-speed Ethernet, all system information is replicated on every terminal across the TCP/IP network. If a terminal is removed from the LAN, all information is automatically synchronized when the terminal re-enters the network.

EXPANDABLE

Reflection POS is scaleable, from a single stand-alone terminal to a chain of restaurants with a network of terminals at each location. Sales and labor information can be consolidated at headquarters using NCC RestaurantHQ™.

COMPLIANT

Electronic Scale

Reflection POS includes a scale module for interfacing with electronic scales. Container weights are automatically deducted to compute the actual weight of the product. Reflection has been evaluated under the National Type Evaluation Program and is certified to meet the requirements mandated by the National Council for Weights and Measures.

Secure Credit Card Processing

Reflection POS has been developed to meet or exceed the requirements mandated by the PCI Council. Reflection POS features an embedded operating system, eliminating the risk of software viruses and spyware. In today's high-tech world of cyber crime, why take a chance with anything else?
